Statement on the EIA report for a Fennovoima Nuclear Plant

Vienna, 13th December, 2008

Dear Sir or Madam,

the **Viennese Platform "Nuclearfree Future"** are deeply concerned about the planned Finnish NPP project.

Nuclear power is dangerous, expensive and an absolutely outdated way of generating electricity:

- Nuclear power is neither a renewable form of energy nor can it stop climate change.
- Due to the shortage of Uranium, its price has increased twentyfold since 2000.
- The nuclear waste problem is not solved even if Finland is building a final repository.
- From Uranium mining to the final storage of nuclear waste, nuclear energy is not environmentally friendly at all.

Investing in NPPs prevents more useful solutions such as developing renewable energies!

Please be so kind as to forward this comment to the applicant.

Yours sincerely,

Johanna Nekowitsch
Wiener Plattform
